

Guam Directory of Agricultural Services & Providers

2013-2014

INTRODUCTION

This directory was made possible through direct funding from USDA NIFA Extension Integration Pest Management Coordination Program (EIPM-CS). Indirect funding was provided by University of Guam-Cooperative Extension Service (CES). This directory aims to provide stakeholders and service providers access to accurate and up-to-date information about agriculture and IPM related services provided by local and federal government agencies on Guam. Additionally, this directory provides residents of Guam with information on where to obtain Agricultural assistance including services and products offered by commercial vendors. It is our goal to expand the existing and developing new collaborative relationships with public and private sector cooperators and the general public. The inclusion of commercial directory does not constitute an endorsement of these vendors by the University of Guam nor our federal partners including Western IPM Center and the U.S. Department of Agriculture, but rather to point out the varied number of available vendors on island. All efforts were taken to ensure that no one commercial service and/or product vendor was intentionally excluded from this directory.
