Territorial Message

It is our great pleasure to present to you the Guam Power Authority's 1997 Annual Report. The Guam Power Authority accomplished many feats in 1997 that all of the people of Guam can be proud of.

This administration's dedication to building public-private partnerships has resulted in the massive revamping and expansion of Guam's power system. Using millions in private capital, without putting any further strain of debt on the next generation the plans laid out in Vision 2001 have now become reality and load-shedding is finally a thing of the past. For the first time in five years, the Guam Power Authority has seen a consistent level of reserve capacity at 100 megawatts. None of this progress would have been possible without the dedication of the Guam Power Authority employees.

After Supertyphoon Paka the true colors of the Guam Power Authority workforce shone through bright and clear as employees put the needs of the people of Guam in front of their own to restore power to all of our residents. The speedy recovery following Paka was indeed testament to the dedication and perseverance of the men and women of GPA. What was initially thought to take three months was accomplished in a record eight weeks.

On behalf of the people of Guam, we thank and salute each of the more than six hundred Guam Power Authority employees. Dangkolo na Si Yu'os Ma'ase!

Carl T.C. Gutierrez
Governor

Madeleine Z. Bordallo
Lieutenant Governor

Board of Directors

The Guam Power Authority is governed by a five-member Board of Directors, selected from the community and appointed by the Governor. Board members are confirmed as directors by the Guam Legislature and serve staggered five-year terms. The Board elects its chairman and vice-chairman from amongst its members. The Board is responsible for overseeing the operations of the Authority and establishing its policies...

Seated left to right: Grace Low, Director;
Frank Shimizu, Chairman; and
Marilyn Megohna, Secretary.
Standing: Eduardo Ilao, Vice Chairman;
and Vicente Lujan, Director.

From the General Manager

Hafa Adai & Greetings:

Since my tenure as General Manager, GPA has made significant strides towards the enhancement of the quality of life for Guam and her people.

Two years ago, the people of Guam were forced to endure daily rolling power outages due to insufficient capacity and equipment in disrepair. Immediate solutions had to be found and with the help of the Governor, Lieutenant Governor and the Legislature, we were able to secure partnerships with members of the private industry to decrease our generation shortfalls. A public-private partnership has been established with the ENRON Development Corp. of Houston to build a 80 MW slow speed diesel with a contract completion of March 1999. Additionally Taiwan Electrical and Mechanical Engineering Services, Inc. (TEMES) is already contributing to the Island Wide Power Grid with the completion of their 40 MW combustion turbine in December, 1997. This unit was instrumental to the speedy recovery following the onset of Super Typhoon Paka. And, lastly, the refurbishment and operation of the Tanguisson Power Plant being managed by Hawaiian Electric Power Corp. Guam, that is now operating at its nameplate capacity for the first time in ten years (26.5 MW per unit). These partnership agreements have twenty year terms at which time the assets will be turned over to GPA.

In December 1997, Guam was barraged by the effects of Typhoon Paka. GPA's power system incurred the worst damage in its 28 year existence. However, the GPA team responded by restoring 99% of the islands electricity within two months of the Supertyphoon - a record for Guam!

Because of the island's unique qualities as well as a convenient geographic location, Guam has been a mecca for tourists in the Asian region. However, the instability of the Asian economic crisis has put a damper on the number of visitors to the island, but GPA is expecting load growth to continue as new hotels and other structures continue to be added to the island skyline. This growth is forecasted to continue well into the next century.

With the IPP's, refurbished generation facilities and a restored transmission and distribution system, I am confident that GPA is positioned to meet any future challenges in what will undoubtedly prove to be a dynamic and exciting road towards the new millennium.

Ricardo S. Unpingco
General Manager

About GPA

GPA is...

An autonomous agency of the Government of Guam supplying electrical energy to approximately 43,000 customers on island of Guam.

Enabling Act

The utility was created by the Guam Legislature in 1968 with operations commencing in early 1969.

Board of Directors

GPA is governed by a five-member Board of Directors, selected from the community and appointed by the Governor. Board members are confirmed by the Guam Legislature and serve staggered five year terms.

REGULATORS

In 1984, through the terms of the refinancing for the Federal Financing Bank, the Guam Public Utilities Commission (PUC) was formed.

This seven-member commission maintains regulatory oversight and ratemaking authority over GPA. The Commission's procedures parallel those used by similar regulatory bodies in the United States. The PUC also has the responsibility and authority to review all contracts that the Authority might engage in which may impact rates and charges.

The IWPS System

Guam's Island Wide Power System (IWPS) consists of generation, transmission and distribution facilities separately owned and jointly and separately operated by the Authority and the Navy.

Under the terms of a "Power Supply Agreement"(PSA) both the Authority and Navy supplied power to each other and shared the cost of operating and maintaining the IWPS on a proportionate basis. In 1989, the PSA was terminated and a Customer Agreement was created. The Agreement gave ultimate responsibility and control of the IWPS to the Authority with the Navy becoming a transmission level customer and provided the basis for acquisition of certain Navy generation and transmission and distribution facilities.

The Authority owns three oil-fired steam generating units, two slow speed diesel units (baseload), three combustion turbine units and twelve diesel units.

Additionally, the Authority is leasing one combustion turbine unit, with an option to purchase.

The Authority is currently evaluating whether or not the unit should be purchased upon expiration of the lease in March 1999.

Collectively, these units have a total net capacity of

372.2 MW. The Navy owns two steam generating units and one combustion turbine at the Piti power plant the Marbo area respectively (all three units are leased and operated by the Authority) with a capacity of 60 MW. The Authority also owns and operates small diesel generation units which are dispersed throughout the island to provide backup power to municipal water pumping stations. Such units are not available for dispatch and are only utilized in the event of system outages.

In addition to generating units, the Authority's property includes 22 substations, 650 miles of transmission and distribution lines, and other buildings, equipment, stores and facilities.

FUTURE PLANNING

Typhoon Paka winds were estimated to reach gusts of up to 230 mph. Damage to overhead lines were extensive requiring additional man-hours to repair and restore power to the residential areas. Although restoration was accomplished at a rapid pace, alternatives to better address repair time has been developed. One of these mitigation processes being implemented is the development of the "hybrid system." Crews report that if a larger portion of the community were utilizing this, system restoration would have been accomplished yet faster. Hybrid systems are defined as a combination of primary high voltage overhead lines with a transformer mounted on a pole and an underground secondary low voltage service line from the transformer to the building.

Currently, GPA encourages its customer to consider utilizing the hybrid system. The advantages are endless some of which include higher efficiency, low maintenance, longer life expectancy, safety and aesthetics. With the assistance of Governor Gutierrez, funding was secured for the completed Talofofo hybrid project and grant funding is being identified for the Dededo and Santa Rita projects. Financing will come through a FEMA grant that Governor Gutierrez is securing resulting in a 90/10 agreement. To further this endeavor Governor Gutierrez is also looking for other grant sources to pursue an aggressive campaign to complete nineteen villages.

Another venue in which the Governor is seeking to make improvements to the power system is the aesthetic presentation of Tumon Bay through the Tumon Bay Redevelopment Plan. The GPA system will be completely underground along San Vitores Boulevard resulting in a more pleasing visual presentation of our main visitor venue.

Public/ Private Partnership

In September 1996, the Authority entered into energy conversion agreements with three private companies, HEI Power Corp. Guam (HEI), Taiwan Electrical and Mechanical Engineering Services, Inc. (TEMES) and Enron Development Piti Corporation (Enron). HEI has agreed to refurbish, operate and maintain two steam units at Tanguisson power plant (included on the Authority's 372.2 MW total net capacity). TEMES has agreed to construct, operate and maintain a 39.5 MW (net capacity) combustion turbine. The power plant was completed in December, 1997 and is contributing to the IWPS (the unit was vital in the restoration processes due to Super Typhoon Paka). Enron has agreed to construct, operate and maintain two slow speed diesel unit (baseload) with a total capacity of 80 MW. All three agreements have 20-year terms at which time the plants will be returned to the Authority.

Electric Rates

Rates for electric service are established by the Authority's Board of Directors and regulated by the PUC. This seven-member commission also has the authority of prior approval of all contracts to be entered by the Authority that could affect rates and charges. The PUC's procedures parallel those used by similar regulatory bodies in the United States.

The Commission Order dated August 5, 1996, approved the transfer of certain Navy generation, transmission, and distribution facilities to the Authority. The transferred facilities are made available under a lease agreement pending final fee simple transfer.

During the period from fiscal Year 1992 through Fiscal Year 1997, the Authority has maintained rates for electric service which have been sufficient to provide for all operation and maintenance expenses, repairs and debt service, and have provided a margin from which a portion of the capital additions to electric system have been financed.

Since the beginning of Fiscal Year 1992, the Authority has adjusted its retail power rates eight times, including the implementation of life line rates of January 1, 1994.

Memberships

The Authority is a member of the American Power Association, which is comprised of over 2000 publicly-owned electric utilities nationwide, including U.S. Territories.

GPA is also a member of the Pacific Power Association whose mission is to promote the direct cooperation, communication and co-ordination of activities among the utilities and the international power industry to improve the quality and minimize the cost of electricity production in the Pacific Island Regions.

On August 8, 1997 Guamanians awoke to reports from CNN that Korean Air Flight 801 had crashed with preliminary reports showing no survivors. The flight had a manifest listing 254 passengers. The Boeing 747 on a routine approach to the A.B. Won Pat Guam International Airport was granted clearance for landing and the pilot believed he was doing so, as the craft's landing gear was lowered. Reports state that preliminary data from flight recorders indicated that the pilot was not aware of the pending disaster. Unfortunately the plane was three miles short of the airport and crashed in the central of

Of the numerous governmental recovery teams it was reported that the Honorable Governor Carl T.C. Gutierrez was one of the first to arrive at the site. The site is located on Navy property so military personnel took the lead in the rescue operation. The crash occurred at about 1:45 a.m. and by 3:00 a.m. the area was swarming with official rescue crews and countless volunteers all which had to fight through ten foot high swordgrass to get to the actual crashsite.

In the end, about 30 personnel from the Governor's office and at least 100 combined employees from GPA and the Guam Environmental Protection Agency assisted in the post recovery operations. When it was granted entrance to the crash site, GPA had to arrange for repairs on the damaged fuel-line estimated to be \$60,000.

Impact from the crash affected residents on Guam both economically and emotionally but is a testament to the courage and selflessness of the people of Guam.

Supertyphoon Paka

...everyone living in Guam who went through Paka has contributed to our recovery. Some gave more than others; some are still working long hours to complete the process. With is most important to remember it that the teamwork, the countless and often untold sacrifices made, the bottomless store of patience and endurance make up the triumph that we all share...

1997 A year to remember...

***Korean Air Flight 801 (source Guam Business News Magazine)**

hills of Guam adjacent to the area known as Nimitz Hill. The plane had crossed a Guam Power Authority pipeline and a closed road, leaving 2,100 foot long tire and wing marks in the landscape before finally running into the hillside. The pipeline spilled about 500 gallons of fuel which was dormant in the tank overnight. The final count showed that out of 254 people aboard 228 had died.

Survivors were sent to Naval Hospital and Guam Memorial, a temporary Morgue was set up at the U.S. Navy Supply Center. Because of the rough terrain survivors had to be strapped to stretchers and pulled up the hilly terrain with ropes to awaiting ambulances and H-46 helicopters, from the HC-5 squadron.

excerpt in letter from Governor Carl T.C. Gutierrez and Lt. Governor Madeleine Z. Bordallo in Estorlan Paka: Guam's Spirit of Recovery.

*Over 600 power

poles were downed or damaged, (90 of them concrete); Another 500 wooden and concrete power poles were left leaning precariously; 270 miles of transmission and distribution line had to be repaired or replaced (enough cable to run a line from Guam to the neighboring island of Saipan and back again); loss estimates to power system exceed \$40 million.

In addition to poles and transmission lines, all of the island's power plants suffered some form of damage, the most notable being the Cabras base load generation facilities which suffered severe damage to its roof and siding.

GPA's standard operating procedures designate the who, what and where of typhoon response even before the first gust of wind blows. For the most part, crews were already on stand-by prior to the passing of the winds. Safety permitting, teams were sent out for primary assessments long before the rest of us had even ventured out to start picking up the pieces.

And so the arduous task of restoration began. The good people from Saipan

Commonwealth Utilities, Palau Public Utilities Corporation, Pohnpei Utility Commission, Yap Utility Commission, Hawaiian Electric Company, Kosrae, Southern California Edison, the United States Air Force, our private vendors GEMMCO, M.D. Crisostomo, WESPAC, Guam Army and Air Force National Guard, J.J. Moving Company and numerous other private companies.

For those of us that have been through serious storms before, the days of post-typhoon recovery struck a familiar chord. But GPA's success at restoring power to most of the island in record time continued to amaze many people. While every day without power seemed long for us at home, perhaps the best judge of just how miraculous our recovery has been are communities outside of Guam who can't believe how quickly we can recover from the onslaught of a super typhoon.

For many years the Guam Power Authority has prided itself on its expertise in power restoration. Super Typhoon Paka was no exception. Even before Condition Four status was declared, storm crews were already set for action. Loved ones were kissed good-bye, crews were set out to fight the battle. From the General Manager down through the ranks, GPA crews and the community were pulling for each other.

GPA personnel were dispatched to make assessments-doing without the typical operational conveniences. In fact, Christmas was even put on hold, Putting aside all their personal needs, the men and women of the

authority kept focus on wholeheartedly providing a return to normalcy in the community, each one with a special story to share, but still focusing on the mission at hand.

To pin-point any one hero in the restoration would be an injustice to the Authority as a whole. Everyone was a hero. The crew member working endless hours, the work detail tasked to prepare food for teams who stayed in the field for 16 hours at a time, the administrative support personnel who answered thousands of telephone calls. Every single employee at the authority deserves the designation of hero.

To the private industries, we are extremely grateful for your support. To the crews from Hawaiian Electric Company, Saipan Commonwealth Utilities, Pohnpei Utility Commission, Palau Public Utilities Corporation, Yap Utilities, Kosrae, Southern California Edison & the United States Air Force & Navy, Guam National Guard and the many other helping hands, we thank you very much and encourage you to keep up the good work.

And a very special thank you goes to Governor Carl T.C. Gutierrez, who spent many long, arduous hours with his sleeves rolled up, pitching in to help restore power to the people. His willingness to work with the crews, to humbly offer a helping hand when one was needed, to make sure that no person was forgotten or left behind, to cut red tape and make command decisions, to

help us to accomplish twice as much in half the time.. he deserves a special designation: hero.

Finally, to you the patient and understanding people of Guam, who have waved and smiled and shouted words of encouragement, who have offered moral support as well as cold drinks and barbecue, and you who have cheered us on as the power was restored, we thank you most of all for your unwavering support.

**reprinted from Estorion Paka: Guam's Spirit of Recovery*

Impact of Natural Disasters

Although natural disasters have resulted in damage to GPA facilities, the Authority has demonstrated its ability to quickly restore service to its customers following such events. The Authority has taken certain measures over the past seven years to make its system more resistant to typhoons and earthquakes. Those measures include an ongoing program to replace wooden electric utility poles with concrete poles that are more resistant to high winds, and the use of concrete buildings to house the Authority's permanently installed new generating units. The Authority has also installed 141 standby generators to provide backup power for municipal water pumping and sewer lift pumps owned and operated by Guam Waterworks Authority (GWA formerly PUAG). These generators will be used during system power outages resulting from major storms or other causes. Additionally, standby generators have been provided for GWA's two large sewer treatment plants.

FINANCIAL REPORT

Guam Power Authority

GUAM POWER AUTHORITY

FINANCIAL STATEMENTS AND INDEPENDENT AUDITORS' REPORT

YEARS ENDED SEPTEMBER 30, 1997 AND 1996

INDEPENDENT AUDITORS' REPORT

The Board of Directors
Guam Power Authority:

We have audited the accompanying balance sheets of Guam Power Authority, a component unit of the Government of Guam, as of September 30, 1997 and 1996, and the related statements of earnings and retained earnings and cash flows for the years then ended. These financial statements are the responsibility of GPA's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with generally accepted auditing standards and the standards applicable to financial audits contained in Government Auditing Standards issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such financial statements present fairly, in all material respects, the financial position of Guam Power Authority as of September 30, 1997 and 1996, and the results of its operations and its cash flows for the years then ended, in conformity with generally accepted accounting principles.

In accordance with Government Auditing Standards, we have also issued our report dated February 2, 1998, on our consideration of the Guam Power Authority's internal control over financial reporting and our tests of its compliance with certain provisions of laws, regulations, contracts and grants.

February 2, 1998

Net cash provided by operating activities	\$ 30,705,072	\$ 20,052,343

See accompanying notes to financial statements.

(1) Summary of Significant Accounting Policies

Organization: The Guam Power Authority (GPA) is a component unit of the Government of Guam (GovGuam). GPA is subject to the regulations of the Public Utility Commission of Guam (PUC), and has adopted the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission (FERC). Because of the rate-making process, certain differences arise in the application of generally accepted accounting principles between regulated and non-regulated businesses. Such differences mainly concern the time at which various items enter into the determination of net earnings in order to follow the principle of matching costs and revenues.

Estimates: The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Utility Plant: Utility Plant is stated at cost, which, as to certain plant transferred from the power division of the Public Utility Agency of Guam in 1969, is based on estimated cost as determined by an independent appraiser. Cost includes \$4,177,479 representing generation and transmission assets transferred by the United States Navy (Navy) as described in note 3. Cost also includes an allowance on certain projects for funds used during construction of specific power generation plants based on the net cost of borrowed funds used for construction pur-

(1) Summary of Significant Accounting Policies, Continued

poses. The cost of utility plant retired or otherwise disposed of, plus removal costs and less salvage, is charged to accumulated depreciation. Contributions in aid of construction are deducted from the cost of the utility plant.

Depreciation: Depreciation is computed using the straight-line method over the estimated useful lives of the assets (25 - 50 years for plant assets). Depreciation expense for 1997 and 1996 was approximately 3.7% and 3.4%, respectively, of the cost of depreciable properties.

Cash and Cash Equivalents: Cash and cash equivalents include cash on hand, cash in banks, certificates of deposit, money market accounts and U.S. treasury bills with original maturities of less than 90 days in the interest and principal funds for debt repayment, the bond indenture funds, and the self-insurance fund. Cash and cash equivalents do not include money market accounts in bond reserve funds held by bond trustees.

Inventories: Materials and supplies inventories are stated at the lower of cost (weighted average) or market. Fuel inventories are stated at cost using the first-in, first-out method of valuation.

Contributed Capital: GPA commenced operations in April, 1969 when assets and liabilities with a net value of \$7,898,400 were transferred to GPA from the power division of the Public Utility Agency of Guam. An additional \$20 million loan from the Government of Guam was converted to contributed capital during the year ended September 30, 1992.

The U.S. Department of the Interior provided GPA with \$9.8 million for rebuilding a portion of the distribution system utilizing concrete poles to better resist typhoon damage. Funds were provided directly to the military construction officer for designing and administering the rebuilding work. Beneficial use of all lines has been given to GPA. The Federal Emergency Management Association (FEMA) provided a \$3,066,000 grant to GPA to subsidize the costs of housing generators to run waterwell pumps.

Accrued Annual Leave: Employees are credited with vacation leave at rates of 104, 156 or 208 hours per fiscal year, depending upon their service time with GPA. Accumulation of such vacation credits is limited to 480 hours at fiscal year end and is convertible to pay upon termination of employment.

Sales of Electricity: Sales of electricity are recorded as billed to customers on a monthly cycle billing basis. At the end of each month, unbilled revenues are accrued for each cycle based on the most recent cycle billing and the actual cost of fuel.

Fuel Oil Costs: Fuel oil costs increase or decrease billings to customers with price changes in fuel oil purchased by GPA. Under-recoveries of fuel oil costs are recorded as deferred fuel cost assets in the accompanying balance sheets, and are recovered in future billings to customers.

Allowance for Funds Used During Construction: The allowance for funds used during construction (AFUDC) is provided only for construction projects of more than \$50,000 which require a minimum of 90 days to complete. AFUDC is computed using the interest expense on directly assignable borrowings to finance the projects less interest income on the related unused borrowings which have been invested. AFUDC is provided only during the period in which such projects are undergoing activities to prepare them for their intended use.

Unamortized Debt Issuance Costs: Unamortized debt issuance costs include costs related to the issuance of the Series 1992, Series 1993 and Series 1994 bonds. These costs are being amortized on the straight line method over the life of the bonds.

Cancelled Unit: The cancelled unit account consists of costs incurred in the refurbishment of the Weber Power Barge. The barge refurbishment project was abandoned during the year ended September 30, 1994. These costs are being amortized on a straight-line basis over the life of the bonds used to finance the refurbishment costs.

Reclassifications: Certain reclassifications have been made to the 1996 financial statements to conform with the 1997 presentation.

(2) Accounts Receivable

Accounts receivable at September 30, 1997 and 1996, are summarized as follows:

	1997	1996
Customers:		
Private	\$ 21,926,810	\$ 18,777,044
Government	8,928,419	4,800,324
	30,855,229	23,577,368
Government subsidies	463,055	463,055
Insurance claims (note 7)	1,181,024	1,221,143
Others	2,054,352	3,695,588
U.S. Navy	352,584	3,096,966
Less allowance for doubtful receivables (note 7)	(3,761,916)	(1,591,124)
	\$ 31,144,328	\$ 30,462,996

Substantially all of GPA's customer accounts receivable are from individuals, companies and government agencies based in Guam.

(3) Agreements With The United States Navy

Prior to August 1, 1992, the Island-Wide Power System (IWPS) for Guam consisted (with minor exceptions) of production and transmission facilities owned or operated by the U.S. Navy (Navy) and GPA. From October 1972 to July 31, 1992, costs of operating and maintaining the IWPS together with a return on the Navy's investments therein were shared, based on power delivered to the parties as provided in a "Power Pool Agreement," and on payment by the Navy of its share of GPA's debt service commensurate with GPA's debt service coverage obtained for its customers, but subject to a minimum level of coverage. Effective August 1, 1992, the Power Pool Agreement was terminated. In May, 1995, all outstanding claims between the Navy and GPA associated with the Power Pool Agreement were settled. GPA received \$3.75 million from the Navy as a result of the settlement. The \$3.75 million was recognized as miscellaneous revenue in 1996 in accordance with a PUC stipulation.

Upon termination of the Power Pool Agreement, a customer supplier agreement (CSA) between GPA and the Navy was created. Under the CSA, the Navy became a transmission level customer of GPA. The Navy made available to GPA certain of its generation, transmission and other assets and continued to operate these assets on a subcontract basis. On September 15, 1996, a lease agreement was entered into between GPA and the Navy to transfer to GPA the operations, maintenance and custody of certain Navy-owned joint use electrical transmission and distribution lines, electric power generation facilities, related structures and equipment, together with associated land interest. The facilities are leased to GPA at no cost for a period of fifty years. Navy subcontractor costs incurred for the years ended September 30, 1997 and 1996, were \$2,209,679 and \$16,014,644, respectively.

(4) Short-Term Debt

Short-term debt at September 30, 1997 and 1996, is as follows:

	1997	1996
Thirty-day notes payable drawn on a \$15 million bank line of credit with interest at 7.625% through 7.6875% at September 30, 1997 (6.375% and 6.875% at September 30, 1996), payable at maturity, collateralized by a financing statement against accounts receivable with the bank as lienholder subordinate to the bondholders under GPA's bond issues.	\$ 15,000,000	\$ 15,000,000
Ninety-day notes payable drawn on a \$15 million bank line of credit with interest at 7.71875% through 7.75% at September 30, 1997 (6.8125%-6.825% at September 30, 1996), payable at maturity, collateralized by a financing statement against accounts receivable with the bank as lienholder subordinate to the bondholders under GPA's bond issues.	11,014,975	9,892,368
	\$ 26,014,975	\$ 24,892,368

(5) Long-Term Debt

Long-term debt at September 30, 1997 and 1996, is as follows:

Bonds:	1997	1996
1992 Series, interest at varying rates from 2.65% to 6.3% payable semiannually in October and April, principal and mandatory sinking fund payments payable in varying annual installments with a payment of \$2,305,000 in October, 1994, and increasing to \$11,040,000 in October, 2022.	\$ 148,950,000	\$ 151,430,000
1993 Series, interest at varying rates from 3.90% to 5.25% payable semiannually in October and April, principal and mandatory sinking fund payments payable in varying annual installments commencing with a payment of \$1,725,000 in October, 1996, and increasing to \$6,535,000 in October, 2023.	98,275,000	100,000,000
1994 Series, interest at varying rates from 5.20% to 6.20% payable semiannually in October and April, principal and mandatory sinking fund payments payable in varying annual installments commencing with a payment of \$1,500,000 in October, 1997, and increasing to \$7,630,000 in October, 2024.	102,900,000	102,900,000
	350,125,000	354,330,000
Note: MDI Guam non-interest bearing note payable in exchange for funds received for the construction of Manenggon Hills substation. The note is being repaid by deducting 80% of MDI's non-fuel charges from future power billings.	3,454,286	3,905,619
	353,579,286	358,235,619
Less current maturities	(6,259,784)	(4,589,784)
	347,319,502	353,645,835
Less discount on bonds	(6,016,562)	(6,400,876)
	\$ 341,302,940	\$ 347,244,959

At September 30, 1997, estimated maturities of long-term debt through 2002 and subsequent years are as follows:

1998	\$ 6,259,784
1999	6,534,784
2000	6,834,784
2001	7,159,784
2002	7,509,784
Subsequent years	319,280,366
	\$ 353,579,286

The proceeds of the 1992 series bonds, face value of \$158 million, were used to construct and acquire additional generating capacity, to build additional transmission facilities, and to refund existing long-term debt at the time of issuance. Bond proceeds of approximately \$19,700,000 were also used to establish escrow funds for the purpose of defeasing several existing series of bonds over their scheduled maturities.

The proceeds of the 1993 series bonds, face value of \$100 million, are being used to finance certain acquisitions of additional generating capacity, the construction of additional transmission facilities, and also to upgrade and refurbish certain existing equipment.

Proceeds of the 1994 series bonds, face value of \$102.9 million, are being used to finance the construction of an additional baseload generating unit and the construction of four new substations.

All gross revenues of GPA have been pledged to repay the 1992, 1993 and 1994 series bond principal and interest.

Principal and interest due on the defeased bonds amounted to approximately \$19,200,000 at the date of the 1992 advanced refunding. The net difference between funds deposited with escrow agent and the bonds refunded of \$500,000 has been recorded in unamortized debt issuance costs and is being amortized on a straight-line basis over the lives of the 1992 series bonds.

Discounts associated with the 1992, 1993 and 1994 bond series are being amortized using the interest method over the lives of the bonds.

(6) Employees' Retirement Plan

Employees of GPA hired before September 30, 1995 are under the Government of Guam Employees' Retirement System (a defined benefit, contributory pension plan). Employees hired after September 30, 1995, are members of the new Defined Contribution Retirement System (DCRS). Until 1998, those employees who are members of the defined benefit plan with less than 20 years of service at September 30, 1995, have the option to switch to the Defined Contribution Retirement System. Otherwise, they remain under the old plan.

The Defined Benefit Plan and the DCRS are administered by the Government of Guam Retirement Fund, to which GPA contributes based upon a fixed percentage of the payroll for those employees who are members of the Plan.

As a result of the most recent actuarial valuation performed as of September 30, 1995, it has been determined that for the year ended September 30, 1997, a minimum combined employer and employee contribution rate of 28.1% of covered Defined Benefit Plan payroll is required to appropriately fund the current cost, amortize prior service costs and provide for interest on the unfunded accrued liability. Statutory contribution rates for employee and employer contributions were 9.5% and 18.6%, respectively, for the year ended September 30, 1997. The effect of GPA's prior year accruals for its share of pension underfunding reduces the actuarially determined employer contribution rate from 18.6% to an effective rate of 16.0% for the year ended September 30, 1997. In recognition of the above, an accrual reduction of 2.6% of covered payroll is necessary to reduce the unfunded liability based on the difference between the effective rate of 16.0% and the employer's statutory rate of 18.6%. The effective employer accrual rate for the year ended September 30, 1996 was 15.785%.

The plan utilized the actuarial cost method termed "entry age normal" with an assumed rate of return of 8% and an assumed salary scale increase of 6.5% per annum. The most recent actuarial valuation performed as of September 30, 1995, did not provide a breakdown of actuarial present value of vested and non-vested accumulated plan benefits by sponsor or net assets available for benefits by sponsor.

Contributions into the DCRS by members are based on an automatic deduction of 5% of the member's regular base pay. The contribution is periodically deposited into an individual annuity account within the DCRS. Employees are afforded the opportunity to select from different annuity accounts available under the DCRS.

Employer contributions into the DCRS are based on a statutory amount of 18.6% of the member's regular base pay. Of the amount contributed by the employer, only 5% of the member's regular base pay is deposited into the member's individual annuity account. The remaining 13.6% is contributed towards the unfunded liability of the defined benefit plan.

Members of the DCRS who have completed five years of government service, and have attained the age of 55 years at termination, have a vested balance of 100% of both member and employer contributions plus any earnings thereon. Members who have completed five years of service, but have not attained the age of 55, are eligible only for the amount of member contributions plus any earnings thereon.

The cost to GPA for retirement contributions for the years ended September 30, 1997 and 1996, is as follows:

	1997	1996
Cash contributions	\$ 4,524,775	\$ 4,432,615
Accruals	(626,524)	(816,971)
	\$ 3,898,251	\$ 3,615,644

(7) Commitments and Contingencies

Commitments:

Capital Commitments

The 1998 capital improvement project budget is approximately \$24 million. The five-year capital improvement project budget proposed by management for 1998 through 2002 is estimated to be \$101 million. These budgets are subject to change by the Board of Directors.

GPA has approximately \$42.8 million in purchase commitments as of September 30, 1997.

GPA has also entered into agreements to purchase fuel from certain suppliers at prices yet to be determined.

Leases

GPA presently leases space for operations from several locations under non-cancellable operating leases with remaining lease terms at September 30, 1997, varying between one and four years.

During the year ended September 30, 1993, GPA entered into a three-year operating lease for a turnkey gas turbine power plant. The lease calls for fixed monthly payments of \$66,666 plus a variable payment based on the LIBOR rate. In March 1996, this lease was renewed for an additional three years. At the end of the lease term, GPA has the option of purchasing the equipment for \$11.2 million or returning the equipment to the bank. If GPA returns the equipment to the bank and the bank sells the equipment to a third party, GPA is obligated to pay the difference between the sale price and the principal balance due on the bank's debt to finance the acquisition of the turbine. Management has not determined if the equipment will be purchased at the expiration of the lease term.

Minimum future lease payments under operating leases through the year 2000 are as follows:

1998	\$ 2,336,604
1999	1,475,406
2000	1,074,410
	\$ 4,886,420

Energy Conversion Agreements

In June 1996, Public Law 23-103 was enacted to address the need for additional power plant capacity to meet GPA's power supply deficiencies. The public law authorized GPA to procure power generation, substation and transmission services.

In September 1996, GPA entered into agreements to purchase electricity produced by plants constructed or refurbished and operated by three companies. GPA has certain minimum power purchase commitments under each of the three agreements. Actual commitments at September 30, 1997, cannot be quantified as they are subject to adjustment annually and are dependent on the actual completion dates for the TEMES and Enron agreements. The major terms of the three agreements are as follows:

HEI Corporation (Guam) (HEI) - HEI has refurbished and is operating and maintaining a power generating plant owned by GPA, at the Tanguisson Power Station. GPA provided, as of the commencement of the agreement in November 1996, all inventory, parts, tools and equipment on hand or on order, for the operation and maintenance of the power station. HEI is responsible for the replacement of inventory, parts, tools and equipment during the twenty year operating term of the agreement. All inventory, parts, tools and equipment will be transferred by HEI to GPA at the termination date. GPA will retain ownership of the power station during the operating term and will supply the fuel necessary to generate electricity for dispatch to customers.

(7) Commitments and Contingencies, Continued

Energy Conversion Agreements, Continued

Taiwan Electrical and Mechanical Engineering Services, Inc. (TEMES) - TEMES has agreed to construct, operate, and maintain a 40 MW capacity peakload power plant. TEMES will be responsible for all financing and construction costs of the power plant. The target completion date is December 5, 1997. Until the termination date, which is twenty years from the completion date, GPA will supply and deliver all fuel required by the Power Station and shall take electricity generated by the Power Station as determined by GPA's economic dispatch requirements. GPA guarantees to take and purchase annually 87,600 Mwh from TEMES. From the date of the contract until the termination date, TEMES shall own the Power Station and all the fixtures, fittings, machinery and equipment on the site or used in connection with the Power Station. TEMES shall be responsible for the management, operation, maintenance and repair of the Power Station during the twenty year period. Each month after the completion date, TEMES will charge GPA capacity fees and fixed O&M fees.

Enron Development Piti Corporation (Enron) - Enron has agreed to construct, operate and maintain slow speed diesel engine generation Power Station. The target completion date is December 31, 1998. From the date of the contract until the transfer date which is twenty years from the completion date, Enron shall own the Power Station and all the fixtures, fittings, machinery and equipment on the site which have been supplied by it. During this period, Enron shall be responsible for the management, operations and maintenance of the Power Station. GPA will supply fuel and start-up electricity required for the construction, testing and commissioning of the Power Station. Additionally, GPA shall construct, install and connect the necessary transmission lines. GPA shall take all electricity generated during testing and commissioning of the Power Station. Until the transfer date, GPA shall supply and deliver all fuel required by the Power Station. Each month after the completion date, Enron will charge GPA capacity fees, fixed O&M fees and variable O&M fees.

The term of the TEMES and Enron agreements will end on the last day of the cooperation period of twenty years from the completion date. On termination, the Power Stations constructed will be transferred to GPA, free from any lien or encumbrance, provided all terms of the agreements have been met. The Power Station site is presently leased to GPA by the Navy. GPA has subleased the site to the above companies for a term at least as long as the term of the agreements, at an annual rent of \$100.

Subcontractor costs incurred with HEI under the energy conversion agreement for the year ended September 30, 1997 were \$3,614,751.

Letters of Credit

As of September 30, 1997, GPA has available a \$1.5 million bank line of credit for purchases of parts and supplies, in addition to the two \$15 million lines of credit referred to in note 4. The \$1.5 million line of credit is 100% collateralized by deposits in a savings account maintained by GPA.

As of September 30, 1997, GPA has outstanding letters of credit against all credit lines totalling \$273,976.

Contingencies: Environmental Protection Agency

The administrator of the Environmental Protection Agency (EPA), on May 24, 1986, granted a continuing exemption to GPA under the provisions of Section 325(b) of the Clean Air Act, as amended. The terms of the exemption require monitoring by EPA, certain commitments by GPA regarding fuel stocks and reporting and delineation of grounds for revocation of the exemption.

Government of Guam General Fund

On March 21, 1997, legislation was enacted which requires GPA and three other component units of the Government of Guam to pay the Government of Guam General Fund, a combined amount of \$23 million as in lieu of tax payment for fiscal years 1986 to 1997. The law also requires that these component units be assessed a total of \$3.5 million annually starting in fiscal year 1998. The \$23 million may be paid immediately or over a five to ten year period with financing terms to be negotiated. GPA's share of the \$23 million has not yet been determined; accordingly, no liability for this contingency has been recorded as of September 30, 1997.

(8) Cash and Investments

The indentures for the 1992, 1993 and 1994 series revenue bonds (note 5) require the establishment of special funds to be held and administered by trustees and by GPA. In addition, proceeds from borrowings to finance generation and transmission facility construction are maintained by GPA in construction accounts. Funds in these accounts are required by loan agreement or public law to be used for generation and transmission facility construction. At September 30, 1997 and 1996, investments and cash held by trustees and by GPA in these funds and accounts are as follows:

	1997	1996
Construction funds	\$ 33,567,439	\$ 49,483,477
Bond reserve funds	26,986,361	27,065,801
Working capital fund	12,450,000	10,864,670
Debt service fund	9,442,386	-
Principal and interest funds	7,159,895	14,800,365
Revenue fund	3,141,129	2,862,115
Self-insurance fund	2,483,188	2,565,657
Operating funds	1,852,315	5,888,211
Surplus fund	6,702	209
	\$ 97,089,415	\$ 113,530,505

Investments in debt securities are carried at cost or amortized cost in the accompanying financial statements. Market values shown below implicitly include accrued interest for debt securities.

	Carrying Value	Market Value
1997:		
Cash on hand, in demand and time deposits and money market accounts	\$ 70,102,974	\$ 70,102,974
U.S. treasury notes	20,098,482	20,524,774
Repurchase agreements	80	80
Municipal bonds	6,887,879	6,874,803
	\$ 97,089,415	\$ 97,502,631
1996:		
Cash on hand, in demand and time deposits and money market accounts	\$ 59,610,954	\$ 59,610,954
U.S. treasury notes	19,771,751	20,142,927
Repurchase agreements	27,301,492	27,301,492
Municipal bonds	6,846,308	6,794,621
	\$ 113,530,505	\$ 113,849,994

Credit risk associated with investments is categorized into three levels generally described as follows:

Category 1 - Insured or registered, or securities held by GPA or its agent in GPA's name.

Category 2 - Uninsured and unregistered, or securities held by a party other than GPA or its agent, but in GPA's name.

Category 3 - Uninsured and unregistered, with securities held by a party other than GPA and not in GPA's name.

Demand and time deposits and money market accounts held in GPA's name are non-categorized investments in accordance with Governmental Accounting Standards Board (GASB) Statement #3. As of September 30, 1997, money market accounts, treasury notes and municipal bonds held by trustees amounting to \$42,250,858 are classified as Category 1 investments in accordance with GASB #3. The balance of the investments are classified as Category 2 investments in accordance with GASB #3.

Bank balances of demand and time deposits and money market accounts held in the name of GPA totaled \$6,211,990 as of September 30, 1997. Of this amount, \$418,508 was covered by federal depository and national credit union administration insurance and the remaining \$5,793,482 was uninsured and uncollateralized.

(9) Significant Customer

During the years ended September 30, 1997 and 1996, GPA billed the U.S. Navy \$33,600,000 and \$36,000,000, respectively, for sales of electricity under the customer/supplier agreement.

(10) Fuel Cost Recovery

During the year ended September 30, 1995, GPA recovered \$8 million from a fuel supplier for over-billings which occurred over several previous years. Approximately \$3 million of this recovery was recognized as miscellaneous revenue during fiscal year 1996 in accordance with a PUC stipulation. The balance of \$5 million was determined to belong to the Government of Guam General Fund. These funds were credited against receivable accounts of various government agencies by GPA in fiscal year 1996.

(11) Regulatory Assets

Regulatory assets consist of the following at September 30, 1997 and 1996:

	1997	1996
Deferral of expense associated with an uncollectible receivable from a Government of Guam agency. This cost is being recovered through a water well surcharge approved by the PUC in May 1996, to be collected from GPA's civilian customers beginning June 1, 1996 through March 1, 1998.	\$ 1,505,699	\$ 5,279,448
Deferral of maintenance and repair costs being recovered through maintenance surcharges approved by the PUC, to be collected from GPA's civilian customers and the Navy subject to the provisions of the CSA. The surcharge is to extend through September 30, 1998. This surcharge has not yet been formally approved by the PUC.	5,903,340	4,061,791
	\$ 7,409,039	\$ 9,341,239

(12) Related Party Transactions

A board member of GPA is the principal owner of a supplier who has been doing business with GPA in the past years. Transactions with this vendor during the years ended September 30, 1997 and 1996 approximate \$859,000 and \$1.6 million, respectively.

(13) Subsequent Event

In December 1997, a major typhoon struck Guam and the island was officially declared a disaster area. The resulting damage to GPA's plant assets, and business interruption losses and cleanup costs are estimated to be approximately \$41 million. GPA's hazard insurance provides for a deductible of \$7.5 million and covers damages up to \$15 million to transmission and distribution plant and \$500 million to premise equipment. The Federal Emergency Management Agency (FEMA) has agreed to reimburse GPA for 90% of the uninsured costs, subject to FEMA approval. Final typhoon damages and related insurance and FEMA recoveries may differ materially from these estimates.
