Message of the Governor of Guam

I am very pleased to introduce this second, improved edition of Guam's *STATISTICAL ABSTRACT*, the first edition of which was published in 1970. It is the aim of this summary of social, political, and economic statistics of Guam to provide the community with an accurate and comprehensive picture of the current state and past condition of the Territory.

We are increasingly becoming aware of the need to plan our future before serious or insoluble problems develop. The data presented in this publication reflect the basic ongoing trends in Guam and thereby enlighten us in our continued efforts to properly plan for our island's future welfare.

POPULATION AND VITAL STATISTICS

Tables 1-11

1970 CENSUS OF POPULATION

Number of Inhabitants

General

This report presents statistics from the 1970 Census of Population on the number of inhabitants of the area, its districts and islands and their subdivisions, and places. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code. The law provides for the inclusion of outlying areas of U. S. sovereignty or jurisdiction. The 1970 enumeration included the following areas: American Samoa, the Canal Zone, Guam, the Trust Territory of the Pacific Islands and the Virgin Islands of the United States. Comparable statistics from earlier censuses also are presented in this report.

A major portion of the information compiled from the 1970 Census of Population will appear in Volume 1, Characteristics of the Population, of which this report is part. Collection and processing procedures.—The 1970 census in this area was conducted through direct interview. Enumerators visited each household to collect the information. A single questionnaire was used, which contained all the questions to be asked about every person and household.

The 1970 census questionnaires were specially designed to be processed by FOSDIC (Film Optical Sensing Device for Input to Computers). Enumerators (and for some few items, census clerks) marked the answers in predesignated positions which could be “read” by FOSDIC, from a microfilm copy of the questionnaire, onto computer magnetic tape. A more detailed description of the data collection and processing procedures can be obtained from the Bureau of the Census. Percents and symbols.—Percents which round to less than 0.1 are not shown, but indicated as zero. A dash “—” signifies zero. Three dots “...” mean not applicable. A minus sign preceding a figure denotes decrease. The symbol “NA” means not available.

Boundaries.—The data shown for 1970 relate to the boundaries of the areas as they existed on January 1, 1970. Information on changes between 1960 and 1970 for certain types of areas are given in footnotes to the appropriate tables. Unless otherwise indicated, the data shown for 1960 and previous years relate to the areas as defined at the time of the particular census.

USUAL PLACE OF RESIDENCE

In accordance with census practice dating back to the earliest census, each person enumerated in the 1970 census was counted as an inhabitant of his usual place of residence, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there may be appreciable differences for a few areas.

The implementation of this practice has resulted in the establishing of residence rules for certain categories of persons whose usual place of residence is not immediately clear. Furthermore, this practice means that persons were not always counted as residents of the place where they happened to be found by the census enumerators. Persons without a usual place of residence were, however, counted where they were enumerated.

Members of the Armed Forces living on military installations were counted as residents of the area in which the installation was located. Members of the Armed Forces not living on a military installation were counted as residents of the area in which they were living. Crews of U. S. Navy vessels were counted as residents of the home port to which the particular vessel was assigned; crews of vessels deployed to the overseas fleet were therefore not included in the resident population. Persons in Armed Forces families were counted where they were living on Census Day (e.g., the military installation, “off-base,” or elsewhere, as the case might be.) Crews of U. S. merchant marine vessels were counted as part of the population of the U. S. port in which their vessel was berthed on Census Day. Crews of all other U. S. merchant marine vessels (are not included in the resident population.

College students, as in 1950 and 1960, were counted as residents of the area in which they were living while attending college. Inmates of institutions, who ordinarily live there for considerable periods of time, were counted as residents of the area where the institution was located; on the other hand, patients in general hospitals, who ordinarily remain for short periods of time, were counted at their homes.

Americans who were in foreign countries for an extended period (in the Armed Forces, working at civilian jobs, studying in foreign universities, etc.) are not included in the resident population. On the other hand, persons temporarily away on vacations, business trips, and the like, were counted at their usual residence. Information on such persons was obtained from other members of their families, landlords, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for a person who reported for himself while away from his usual residence and who was also reported at his usual residence by someone else.

URBAN AND RURAL RESIDENCE

The reports for the Canal Zone, Guam, and the Virgin Islands include data by urban and rural residence. For

the 1970 census, the urban population comprises all persons living in places of 2,500 inhabitants or more.

DISTRICTS AND SUBDIVISIONS

The primary divisions of these areas are administrative or judicial districts, or islands. For the purpose of this report, certain of these divisions are further subdivided into areas termed counties in American Samoa, quarters in the Virgin Islands, and municipalities or islands in the Trust Territory of the Pacific Islands. The various geographic divisions are identified in Tables 2 and 3.

PLACES

Data for places are presented in Table 4. Places recognized in this report are generally closely settled centers of population without corporate limits. Places are reported separately where their boundaries are known locally or could be reasonably defined for census purposes. In a few instances, however, the limits of a place were defined arbitrarily.

In American Samoa, places are designated as villages; in the Canal Zone, as towns; in Guam, as cities or villages; in the Trust Territory of the Pacific Islands, as municipalities, towns, or islands; and in the Virgin Islands, as cities.

Section 3

EMPLOYMENT

Tables 28-32

**Employment Characteristics
of the Economy of Guam
First Quarter FY 1972-CY 1971**

The figures tabulated in this provisional report show the total number employed in the private and government sectors. The private industry employment profile was compiled from 831 firms making employment reports. These firms made their reports during the months of July, August, and September. An establishment survey to be made at a future date will remove errors possibly resulting from the three month time-lag or a failure on the part of firm to report the number employed in this establishment. It is expected that the difference in total figures resulting from this report and the upcoming establishment survey will be slight.

Government employment figures were collected and compiled within a period of one week through questionnaire forms and telephone follow-ups.

FOREIGN COMMERCE

Tables 90-94

VOLUME AND CHARACTERISTICS OF INTERNATIONAL TRADE BETWEEN GUAM AND THE REST OF THE WORLD

(STANDARD INTERNATIONAL TRADE CLASSIFICATION SYSTEM)*

*Negotiations in 1968 between the U. S. Department of Commerce and the Government of Guam resulted in a change in recording procedures. The Standard International Trade Code System in use by the United

States has been adopted by Guam. The U. S. is no longer classified as a foreign port for export purposes. A second result of the 1968 negotiations was the failure to record export-import figures during that year.
