FOREWORD

This volume is the thirteenth edition of the Annual Statistical Report prepared in a booklet printed form. It contains data compiled from certificates registered with the Office of Vital Statistics (these certificates can be found on the back). The time period for this report is based on calendar year 1982.

It is hoped that this report will be useful to health data users. Questions and comments concerning data presented in this report should be directed to the Department of Public Health and Social Services, Office of Vital Statistics, P.O. Box 2816, Agana, Guam 96910.

In analyzing any data, the possibility of errors should not be overlooked. There are several types of possible errors, including errors by the informant as well as errors in processing and compilation. However, the most potentially dangerous error would be that of improper interpretation.

NATALITY - In 1982, Guam's live birth rate was 27.5 per 1,000 population. There were 2,267 babies born to married mothers and 725 to unwed mothers. Male births still accounted for 51.8 percent of total births and 48.2 percent were female. A total of 2,992 live births occurred for calendar year 1982 as compared with 3,008 for the previous year.

Multiple births for the year came to 53 and this constituted 1.8 percent of the 2,992 births occurred within the island.

The illegitimate birth rate among residents was 242.3 per 1,000 live births. There were 725 illegitimate live births in 1982 as compared to 663 for 1981, an increase of 62.

Babies of low birth weight, those weighing under five (5) pounds, eight (8) ounces, totaled 255 or 8.5 percent of the 2,992 live births recorded. The normal birth weight babies, those weighing five (5) pounds, nine (9) ounces to nine (9) pounds, fourteen (14) ounces were 2,710, 90.6 percent and 27 infants had high birth weight or 0.9 percent.

For the year, 1,971 or 65.9 percent of the 2,992 mothers reported that they had seen a physician for prenatal care within the first three months of their pregnancy. A total of 24 mothers or 0.8 percent of total births reported that they received no prenatal care at all.

MORTALITY - A total of 443 deaths was registered in 1982, 37 more than in 1981.

The most important data item reported on the death certificate is the cause of death. Knowing what people die of provides a measure of the health of the population. Death statistics by cause of death were based on death certificates coded for underlying cause using the 9th Revision of the International Classification of Diseases, World Health Organization.

The leading cause of death continued to be heart disease, accounting for 116 or 26.2 percent of all deaths. The ranking of the three (3) most frequent causes of death - heart disease, neoplasms and cerebrovascular disease has remained the same since 1980. Since 1973, perinatal conditions has been listed as one of the top ten leading causes of death except for 1979 and 1982. Diabetes mellitus has moved up from ninth place in 1981 to the fifth place. Other diseases of central nervous system climbed from seventh place in 1981 to fourth place in 1982. Motor vehicle accidents dropped from the fifth place to eighth in 1982.

MARRIAGES - In 1982, the number of marriages was 1,393 compared to 1,480 in 1981. The rate was 12.8 per 1,000 population, a slight decrease from the rate of 14.0 recorded in 1981.

For individuals previously widowed, the highest number of marriages occurred in the age groups 25-29 and 45-49 for women and 50-54 for men. Among those previously divorced, the age group 25-29 has the highest number of marriages for women and age group 30-34 for men. Age 25-29 was the most common age group for first marriages for both women and men. Of all the brides, 1,148 or 82.4 percent had never been married before; 1.4 percent were widowed; 14.9 percent were previously divorced; and 19 or 1.4 percent for annulment. The previous marital status of grooms was 1,135 or 81.5 percent were never married; 1.6 percent were widowers; 15.6 were previously divorced and 1.3 percent were annulled just about the same for brides. For marriages under the age of twenty, 16.5 percent were among the brides and 7.5 percent among the grooms.

June was the most popular month for marriages in 1982 with 138 marriages. The least popular month was January with only 81 marriages taking place.

DIVORCES - The trend in divorces for 1982 was upward with a total of 458 as compared with 357 in 1981. The rate was 4.2 per 1,000 population.

Marriages of 20 years and over duration had the highest number of divorces - 59 cases. Next was 3 years duration with 52 cases.

The largest proportion of wives and husbands undergoing divorce in 1982 was in the age group 25-29. The next age group was 20-24 for wives and age group 30-34 for husbands.

The year ended with 50 annulments.

DEFINITIONS

Since this report utilizes various terms and technical connotations, it is necessary to define them to aid reader in the correct interpretation of the data. The following terms and notes are listed to achieve that objective.

BIRTH WEIGHT - Weight of fetus or infant at time of delivery.

LIVE BIRTH - The complete expulsion or extraction from its mother of product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes, or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord or definite movement of the voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached.

GESTATIONAL PERIOD - Number of weeks elapsed between the first day of the last menstrual period and date of delivery.

LIVE-BIRTH ORDER - Order number is equal to number of previous live births plus current birth.

LOW-WEIGHT - Birth wherein the weight is equivalent to 2,500 grams or less (5lbs., 8ozs.).

FETAL DEATHS - Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

INFANT DEATH - Death occurring to an individual of less than one year of age.

MATERNAL DEATH - Death wherein the physician has designated a maternal condition as the underlying cause of death.

NEONATAL DEATH - Death occurring to an infant less than 28 days of age.

PERINATAL DEATH - The total of fetal deaths and deaths to infants within the first six days of life.

OCCURRENCE - Place where the event actually occurred.

UNDERLYING CAUSE OF DEATH - That condition giving rise to the chain of events leading to death.

NATURAL INCREASE - The excess of births over deaths.

GUAM CHILDREN MORTALITY
(Ages 18 Years and Below)

1982

In this report, the birth and death certificates and medical records of children below 18 years of age who died on Guam in 1982 were reviewed. Not available for review were 14 birth certificates of children born out of Guam and 9 medical records of military dependents.

TABLE I Number of Deaths

NUMBER OF DEATHS:

January to March, 1982	10
April to June, 1982	11
July to September, 1982	17
October to December, 1982	15
TOTAL	53 (12%)
GUAM TOTAL DEATH	443

Table I shows the quarterly and whole year number of children in the age of 18 years and below who died in 1982. There were 53 (12%) deaths out of 443 total deaths of all ages for 1982. Seventeen deaths during the July to September period was highest.

TABLE II Population and Age

POPULATION AND AGE:

TOTAL	8	2	9	2	13	4	14	1	44	9	53
									83%	17%	

Table II showed the death incidence according to civilian and military population and age group. The 9 (17%) deaths among military dependents is directly proportional to the number of military and their dependents to the civilian population of Guam. Higher incidence of death occurred during neonatal and infancy period in both civilian and military population. Among the military dependents, only two deaths after infancy. Both deaths were caused by accidental drowning.

*Birth weight unknown for children from off-island

As shown in Table IV among the 53 deaths, 15 (28%) have their birth weights below 5 pounds, 8 ounces, however only 9 (17%) infants and whose birth weights are below 3 pounds (less 1,363 grams) gave prematurity as immediate cause of death.

Table V showed the causes of death of children who died below 18 years of age. As stated perviously, 35 (66%) death occurred among neonates and infants of which 10 (28%) was due to congenital malformations, 10 (28%) due infections such as meningitis, and pneumonia, 9 (25%) due to prematurity, 3 (8%) due to birth trauma, 3 (8%) sudden infant death syndrome and 1 (3%) due to neuromuscular disease.

Of the 10 mortality with congenital malformation, 4 (40%) of which 3 are females and 1 male have congenital heart, 2 (20%), both females, has biliary atrexia and one patient of each for anencephly gastrochisis, hydrocephalus and multiple anomalies. Incidence of congenital malformations showed more among females than males, 1.5 females to every male.

Second age group with high mortality was preschool (1-4 years) age group. There were 9 (17%) deaths, with 6 due to accident, 1 sudden infant death and 2 due to pneumonia. Among the school (5-14 years) age group, there were 6 (11%) deaths of which 2 were due to accident, 2 malignancy, 1 blood dyscrasia and 1 meningitis (unspecified). Of the teenage (15-18 years) age group, there were 3 (6%) deaths with 1 vehicle accident, 1 suicide and 1 viral encephalitis.

Social Background - See TABLE VI.

TABLE VI

Social Background

[illegible]

As shown in Table VI, there is no way that analysis of social background could be helpful due to incompleteness of record. However, for purposes of information, of the 53 deaths, 14 (26%) are born by single mothers of which 10 are of Chamorro descent and 4 of Commonwealth of Northern Marianas.

As to age, the youngest was 16 years old, unwed mother and the oldest was 40 years old married mother. The oldest single mother was 30 years old. Highest grade attained by single parents was 11th grade. The oldest mother and father had the lowest education attainment 3rd grade.

B. Fetal Death

The number of fetal death was reviewed. Due to incompleteness of records not much information could be obtained.
