Certificate of Death	113
Certificate of Fetal Death	114
Certificate of Marriage	115
Certificate of Divorce and Annulment	116

FOREWORD

This volume is the seventeenth (17) edition of the Annual Statistical Report prepared in a booklet printed form. The report, required under Section 3108 of 10 Government Code Annotated Chapter 3, tabulates data on Guam births, deaths, infant and fetal deaths, marriages and divorces. It contains data compiled from certificates registered with the Office of Vital Statistics (these certificates can be found at the back). The time period is based on calendar year 1986.

Records received in this office from the hospitals are carefully examined for inconsistencies and are queried when needed. Annually when registration is considered complete, statistics are compiled for the report and other needed studies.

It is hoped that this report will be useful to health data users. It provides its users with an overview of the health status of Guam population. Questions and comments concerning data presented in this report should be directed to the Department of Public Health and Social Services, Office of Vital Statistics, P. O. Box 2816, Agana, Guam 96910.

In analyzing any data, the possibility of errors should not be overlooked. There are several types of possible errors, including errors by the informant as well as errors in processing and compilation. However, the most potentially dangerous error would be that of improper interpretation.

NATALITY - the total number of live births recorded for the year was 3309, the birth rate being 26.7. The number of births in 1986 increased by 3.5% over 1985.

There were 36 multiple births as compared to 55 for 1985 - 1.1% of all births.

The total number of births to teenage mothers was 462 accounting for 14% of total births for the year of 3309, which is an increase from previous year. Women aged 20-44 were responsible for 86.0 percent of all live births.

Low birth weight, which is a measure of prematurity is actually defined as newborn, weighing less than 5 lbs. 9 oz., 1986 had 235 or 7.1% of all births. The comparable figures for 1985 were 268 and 8.4 percent. In relation to age of mother, there were 120 low weight births or 3.6 percent of all births to mothers age 15-24.

There were 1038 illegitimate live births representing 31.4 percent of all live births. This is an increase as compared to 30.3 percent in 1985. Women under age 20 accounted for 32.7 percent of all illegitimate live births for the year. The illegitimate or out-of-wedlock rate increased from 303.1 in 1985 to 313.7 in 1986.

Congenital malformations were mentioned on 49 birth records for 1986. This corresponds to a rate of 14.8 per 1,000 live births.

MORTALITY - 1986 ended with a total of 451 deaths as compared to 441 deaths occurring in 1985. The death rate was 3.6 per 1,000 population for 1986 and 3.7 for 1985. Males continue to die at earlier age than females.

Deaths to infants under one year of age came to a total of 31 at a rate of 9.4 per 1,000 live births and showing a decrease from previous year.

Sixty-three percent of the deaths were due to the five major causes for the year — diseases of the heart (31.0%), neoplasms (12.6%), cerebrovascular diseases (6.9%), motor vehicle accidents (6.9%) and pneumonia (5.8%). The first three leading causes have remained the same when compared to 1985. The ranking of the other causes has changed slightly.

MARRIAGES - In 1986, a total of 1522 marriages were registered at a rate of 12.3 as compared to 12.5 for 1985.

The greatest number of marriages occurred, brides and grooms, was within the age group 20-24. There were 183 marriages under the age of twenty for brides and 71 for grooms. Teenagers represent 16.7 percent of all people married during the year.

The month of June was again the most popular month for getting married with 166 or 10.9 percent followed very closely by April. March and November came out with the least number of 101 marriages each.

DIVORCES - There were 1023 divorces recorded - an increased of 147 cases from 1985. The divorce rate was 8.3 per 1,000 population, still showing an upward trend every year.

Twenty one percent of the divorces involved at least one child under 18 years of age for a total of 217 children.

Out of 1023 divorces granted, 44.8 percent were between the ages of 25 and 34 for women and 40.9 percent for the men.

DEFINITIONS

Since this report utilizes various terms and technical connotations, it is necessary to define them to aid the reader in the correct interpretation of the data. The following terms and notes are listed to achieve that objective.

Birth Weight	Weight of fetus or infant at time of delivery.
Live Birth	The complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord or definite movement of the voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached.
Gestational Period	Number of weeks elapsed between the first day of the last menstrual period and date of delivery.
Live-Birth Order	Order number is equal to number of previous live births plus current birth.
Low-Weight	Birth wherein the weight is equivalent to 2,500 grams or less (5 lbs., 8 ozs.) regardless of the period of gestation.
Fetal Deaths	Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.
Infant Death	Death occurring to an individual of less than one year of age.
Maternal Death	Death wherein the physician has designated a maternal condition as the underlying cause of death.
Neonatal Death	Death occurring to an infant less than 28 days of age.
Occurrence	Place where the event actually occurred.
Natural Increase	The excess of births over deaths.
Perinatal Death	Neonatal deaths plus fetal deaths
Postneonatal Death	Death of a live born infant 28-364 days of age.
Underlying Cause of Death	That condition giving rise to the chain of events leading to death.
